Specifications	
Capacity	8 x 230mm Cylinder
Net Weight	79 kg
SWL	750 kg
Dimensions	1050x580x1195mm

This unit is a gas bottle handling stillage, it has the capacity for 8 x 230mm cylinders, each bottle can be secured via a ratchet strap which weaves through the stillage. These are perfect for moving multiple gas cages to wherever they're needed, quick and easy. The stillage is powder coated RAL5002. - More information below This is a securing bar which allows front access to the stillage, it locks in it's upright position to reduce injury risk and can be locked/bolted when it's neutral position,. A ratchet strap can be secured to the stillage and then weaved throughout the bottles to keep them secure in the stillage, this strap majorly reduces the chance of a bottle falling or tipping during transporation of the stillage.
