Delivery is calculated at checkout according to postcode and pallets used. Collection from our Kettering premises is free.

Specifications	
Capacity	2 x 230mm Cylinder
Net Weight	18 kg
Dimensions	540x360x1000 mm

This modular gas cylinder storage rack is an affordable and versatile product. It can hold upto 2 cylinders per unit and the units can be fixed to walls or sides, securing them. Alternatively the unit is modular and can be bolted to one another for a large unit. - More information below The units method of strapping bottles in, a lightweight, taught chain wraps around the frontside of the bottle, securing it. The base which the bottles will sit on is designed to be slightly inclined towards the centre of the unit, with this downwards slope that's created it reduces the chance of the bottle tipping, this incline along with the chain makes it very unlikely for the bottle to ever gain enough momemtum to move/break the chain while the unit is stationary.
