Specifications	
Capacity	2 x 210-250mm Cylinders
Net Weight	45 kg
Dimensions	700x700x1380 mm

This is a quality trolley for the safe transport of up to two compressed gas cylinders around the workplace. The trolleys are constructed from steel with support for the cylinders and a restraining safety steel chain of adjustable length. The trolleys are stable and easy to manoeuvre with solid rubber wheels. Suitable for compressed gas cylinders with a maximum diameter of 250mm. Widely used in cold welding workshops, hospitals and other places and can be used as a cylinder storage rack when upright. We also supply a model of this design for carrying one cylinder. It is important that there is no compromise to safety and to avoid manual handling injuries. It is extremely important that compressed gas cylinders are stable during transport to avoid the dangers of cylinders falling to the ground.
